Summary

Software Engineer with 6+ years building and scaling distributed backend systems serving billions of requests/day. Strong end-to-end ownership across design, implementation, rollout, and production optimization. Proven impact on latency, infrastructure cost, and safe large-scale data migrations.

Experience

Microsoft, Software Engineer, Cloud Apps

Tel Aviv, Israel
June 2025 – present

- Designed and shipped a **Redis caching layer** for a high-traffic backend endpoint, cutting **p99 latency 2.3x (260ms -> 110ms)** and reducing **Cosmos DB RU usage by ~17%**, saving **~\$60K/year** in infrastructure costs.
- Contributed to MongoDB-to-Cosmos DB production migration efforts across multiple environments and tenant datasets, including validation tooling, rollout support, and production troubleshooting.

Taboola, Software Engineer, Brand & Agency Platform

Tel Aviv, Israel
Jan 2019 – June 2025

- Core engineer on the team owning Taboola's high-throughput campaign serving stack; collaborated directly with PMs and business stakeholders on roadmap and trade-offs.
- Led backend for **"Banner as Native"**, a flagship initiative that grew display traffic **3.3x** (from ~\$30K to ~\$100K/day in revenue).
- Built and scaled **RTB integrations and infrastructure**, enabling new partner onboarding and significant traffic growth.
- Owned **brand-safety and compliance integrations** (IAS, DoubleVerify), ensuring policy-compliant ad delivery at scale.
- Mentored junior engineers and served as the team's RTB technical reference.

Education

BSc The Hebrew University of Jerusalem, Computer Science
- GPA: 87/100

Jerusalem, Israel
Oct 2016 – July 2019

Skills

Languages: Java, Python

Backend: Spring, distributed systems, API design, caching, performance optimization

Data & Storage: Cosmos DB, Redis, MySQL, Vertica, Aerospike, Cassandra

Infra & Workflow: Apache Airflow, monitoring, production reliability

Strengths: End-to-end ownership, latency & cost optimization, cross-team collaboration
